

A synthesis of early cognitive and language development using (meta-)meta-analysis Supplementary Information

Anonymous CogSci submission

2023-02-01

Each figure shows the dataset from one domain. X-axis is mean age in months. Y-axis is effect size (Cohen's d). Each dot on each figure represents one effect size, with the size denoting the precision of the estimated effect size. The red line represents the predicted value from the best-fitting model, and the shaded area represents the 95% confidence interval.

Label advantage in concept learning

Vowel discrimination (native)

Vowel discrimination (non-native)

Statistical word segmentation

Online word recognition

Mutual exclusivity

Sound symbolism

Categorization bias

Familiar word recognition

Abstract rule learning

Switch task

Mispronunciation sensitivity

Prosocial agents

Simple arithmetic competence

Symbolic play

Natural speech preference

Cross-situational word learning

Language discrimination and preference

Syntactic bootstrapping
